## What is a Hackathon

A hackathon is a coding event where individuals come together to learn new skills, gain new experiences, and create a project involving software, hardware, or both.

## Introducing ULHacks

Are you ready to shape the future of education?

All middle school, high school, and university students are invited to attend ULHacks, a virtual hackathon from August 13th to 15th with the theme of empowering learning! Over the course of 36 hours, you (and optionally on a team with 3 other friends) will have the opportunity to create a project that helps make learning easier, quicker, and more accessible to everybody. We'll be providing mentors, workshops, and activities that will help turn your weekend into an unforgettable experience.

## Prizes

ULhacks contains over \$5000 worth in available prizes.

All participants will receive exclusive benefits to services including 6-months access to Voiceflow PRO, 1-month access to Repl.it Hacker Plan, and 30-day access to Wolfram|One, while extra prizes will be awarded to teams coming in 1st, 2nd, and 3rd place.
